

ORME128 - Rebounds

On négligea les frottements de l'air.

Ainsi, par conservation au cours de la chute de E_m

$$\times mgh_0 = \frac{1}{2}mv_0^2$$

$\times$ 1^{er} rebond

$$mgh_1 = \frac{1}{2}mv_1^2 \quad \text{ou} \quad v_1 = e v_0$$

$\times$ 2^e rebond

$$mgh_2 = \frac{1}{2}mv_2^2 = \frac{1}{2}me^4 v_0^2$$

$\times$ N^e rebond

$$mgh_{\min} = \frac{1}{2}mv_N^2 = \frac{1}{2}me^{2N} v_0^2$$

$$\Rightarrow 2gh_{\min} = e^{2N} v_0^2$$

$$= e^{2N} \cdot 2gh_0$$

$$\Rightarrow N = \frac{1}{2} \frac{\ln(h_{\min}/h_0)}{\ln(e)} \quad \underline{N = 17}$$
